It all started in 1919 - or maybe a bit earlier!

Before becoming a foundry and taking on the name Wichard, the historic factory was initially called the Croix de Fer (or Iron Cross) factory and was actually a paper mill.

The mill owed its name to a forged Iron Cross that was known as 'the paper mill's cross'.

In 1887, the owner at the time sold his establishment to Messrs Bizet and Pradel, who converted it into a cutlery factory.

In 1919, Antoine Bizet formed a partnership with a certain Henri Wichard, setting up a company that would "specialise in the production of everything for the cutlery

industry and locksmithing using processes such as cutting and stamping".

The latter, a blacksmith by trade from a long line of master smiths from eastern France, added his expertise.

Henri Wichard & Co was born.

Up until the end of the Second World War, Wichard forged knife tangs and blades, scissors and components used in the hunting rifles produced by the St Etienne arms factory.

1887: The Croix de Fer paper mill becomes a cutlery factory owned by Bizet and Pradel.

The factory is converted and expanded, including the installation of blade sharpeners, polishers and handle makers.

Antoine Bizet forms a partnership with Henri Wichard - The company Henri Wichard & Co is founded at the Croix de Fer factory

Wichard celebrated its 100th anniversary

The forge - our trade yesterday, our trade tomorrow

Produced in France since 1919, the trade of the blacksmith has undergone significant changes, but it remains a trade for men and enthusiasts. At Wichard, we manage the entire process, from the production of equipment and stamping right through to packaging. Our expertise is passed on throughout the company and we are proud to have kept all of our manufacturing in France.

Why choose a Wichard forged product?

Our manufacturing process: -always manual, always meticulous

There are a significant number of steps involved in the development of each forged Wichard product. For our iconic 2480 snap hook, for example, 21 steps are involved, with the majority of these carried out by a Wichard employee.

Expertise handed down from generation to generation and innovative development.

Although our expertise has been handed down from one generation to the next, we design and manufacture all of our new products in an innovative and contemporary way.

Our design department innovates by using modern methods for development and prototyping.

At the same time, we work to ensure both our expertise and our production methods evolve in order to keep pace with developments in the yachting market.

The main production steps for forged products are as follows:

Wichard quality is what matters most

Our shared goal is to offer our clients products that provide the very best when it comes to safety and quality. In order to ensure this, we deploy a quality control procedure for each batch of manufactured components:

Test/traction bench for mechanical resistance

Dimensional checks

Drop tests for our safety tethers

During the 2000s, following a decision taken by upper management and private shareholders, Wichard became a group incorporating a number of different trades, with more than 250 employees in France in 2019. Through these

various acquisitions, the Wichard Group is aiming to become a major player in yachting, particularly through the group's two subsidiaries in the USA and in Australia.

Protecting the environment

At Wichard, we don't simply pay lip service to environmental protection. When manufacturing our knives, we do everything practical to contribute to Protecting nature on a daily basis:

Respect all applicable environmental requirements

Take active measures to prevent pollution.

Design products that preserve environment and are recyclable

Reducing the manufacturing of sub-standard items, especially waste.

- Producing no more than is required.
- Minimize the environmental impact of its sites by:
 - limiting the consumption of raw materials and energy;
 - using clean manufacturing processes;
 - avoiding the discharge of any material that may pollute the soil, air or waterways and treating its waste effectively.
- Involve its partners and collaborators in its improvement process.

Stainless steel products

Wichard offers a complete range of stainless steel products including:

- Babystay adjusters, backstay adjusters.
- Wire accessories: lifeline hooks.
- Fastenings: folding pad eyes, watertight U-bolts.
- Eye straps, eye nuts and eye bolts.
- Snap hooks and swivels.
- Shackles.

Babystay adjusters

For fitting a jib, setting up a genoa or a solent jib... Both for safety and performance reasons, fitting a removable inner forestay is strongly recommended when there is a roller furling system. Wichard offers a whole range of babystay adjusters. The table below will allow you to determine the best suitable product for your boat.

+ BENEFITS

- Large range of babystay adjusters
- Available with wheel, handle or ratchet
- Ergonomic and comfortable to use
- Easy to install and dismantle
- Forged body and snap hook
- Resistant to high loads
- Perfect for setting a flying sail (solent jib or storm jib)
- Optimizes yacht performance
- Long travel model available

Fastenings

The Wichard range intended for safety fixing of deck and rigging components, provides an elegant and effective solution.

This range has applications that extend beyond the maritime sector, and they are also used in the industrial field, as well as for architectural purposes and interior decorating.

Wichard offers a wide range of padeyes:

- Folding padeyes in stainless steel or titanium.
- Toe rail padeyes.
- U-bolts.
- Watertight U-bolts.

Folding pad eyes

+ BENEFITS

- Made in France
- Hot forged
- Available in single and double models
- Available in 316L/17.4 Ph s/s or Titanium
- Outstanding working loads in all position
- Compact, can be folded
- Silicon pad to reduce noise and vibrations
- Aesthetic
- Multi-use: fastening, shrouds, blocks, jackstays etc...

Wichard folding pad eyes comply with ISO 15085 and are highly recommended for lifeline and tether fastening points

Wichard padeyes: Choose the original!

Only Wichard padeyes are completely forged. They are 100% safe, highly resistant to corrosion and their design is suitable for all types of boats.

Eye nuts and eye bolts

Wichard eye nuts and eye bolts are single-piece forged components that guarantee you excellent safety standards for your fastenings. They come in a broad range of sizes, enabling you to find the solutions best suited to your circumstances. Should you wish to order large quantities with specific lengths or diameters, Wichard can also manufacture custom-made items.

RANGE OF FIXED PAD EYES

+ BENEFITS

- Multi-use : mast foot blocks, reefing blocks, various fastenings
- Mechanical resistance versus corrosion resistance ratio
- Optimized dimensions
- Rounded model for ropes and webbings
- Squared model for stainless steel fastening (fork) and webbing
- 3 sizes per model
- Material : stainless steel Duplex

+ BENEFITS

- Multi-use : Reefing blocks, fastening point on bowsprit, fastening point for blocks.
- Outstanding mechanical resistance
- High corrosion resistance
- Fitting with M6 screws
- Material : Duplex stainless steel grade

Snap hooks

Whatever your application, you will always find the appropriate Wichard snap hook.

Wichard offers a complete range of snaps hooks:

- «HR» snap shackles.
- Trigger snap shackles.
- Quick release snap shackles.
- Snap hooks.
- Carbine hooks.
- Mooring hooks.

The Wichard snap hooks will never break suddenly! They show signs of deformation long before reaching the breaking point.

"HR" Shackles

+ BENEFITS

- Forged in HR stainless steel
- Designed and made in France
- High resistance
- Captive plunger pin
- Large range
- Easy opening
- Multi-use: halyards, tethers etc...

Speedlink trigger snap shackles

Lightweight:

Speedlink was developed using finite element analysis software, and has an optimised design. Its shape, cut-outs and ribs make it extremely light, and give it one of the best strength/weight ratios on the market.

A modern design...

Speedlink's ultra-technical lines make it one of the most modern and efficient snap shackles available.

- The special load-bearing surface of the swivel eye avoids excessive rope wear.
- Its overall design prevents adjacent lines from jamming.

... for efficient operations

- Easy opening: opening under load, by using the release fid, is easy and effortless thanks to the generous passage diameter and its optimised slopes.
- Secure locking: the special shape of the latch reduces inertia and avoids unintentional opening, especially under impact, while the distribution of stresses limits the effort needed to open it under load.

Sturdy:

Speedlink is forged in HR stainless steel and can bear exceptional working and breaking loads for a minimum weight.

Universal eye:
Halyard - Spinnaker - Peeling

+ BENEFITS

- Universal eye version
- For halyards, spinnaker sheets...
- Can handle 2 sheets or 1 sheet and 1 snap hook/shackle
- Forged in HR s/s
- Designed and made in France

Webbing eye: Tack point

+ BENEFITS

- Webbing eye version
- For foresail tack points
- Optimized design for fitting to webbing
- Forged in HR s/s
- Designed and made in France

Opening luff Rope Prefeeder for racing foils and furling systems

Performance

Before re-hoisting, the bowman doesn't need to remove the headsail from the luff groove, he just has to open the prefeeder and close it around the luff tape. No need to remove the headsail anymore!

Ease of use

To open it simply push the spring with your thumb, the jaws will open automatically. To close, squeeze the jaws together between your thumb and fingers, until the spring reengages.

Features :

- Single handed operation by pushing on the spring
- Easy to install with a lashing or fixed to the forestay
- Stainless steel product benefiting from the Wichard know-how to offer the highest reliability
- Weight: 0.050 kg
- Part # 7485

Easy to install

The prefeeder can be easily installed below any headsail foil or headsail reefing configuration. In the closed position, it ensures a smooth and easy sail hoist.

Quick release snap shackles

+ BENEFITS

- Forged in HR stainless steel
- Designed and made in France
- Available with swivel eye, large eye and tack snap configuration
- Ideal for sheets (genoa, spinnaker)
- Outstanding working loads
- Control line for easy to release
- Aesthetic

Working Load (WL): for nautical applications.

Working Load Limit (WLL): for industrial applications only.
The safety factor is 5 times the breaking load.
WLL = Breaking load / 5

+ BENEFITS

- Designed and made in France
- Available with eye to attach strap, or without eye
- Symmetric or asymmetric shape
- Perfect for fast operations
- Standard on Wichard tethers (part # 7001, 7002, 7011)
- Wichard carbine hooks bear the CE/WLL marking

"One hand" sail snaps

+ BENEFITS

- Ideal for setting a headsail
- One hand operation
- Available in 316L stainless steel or brass
- Efficient operation : does not jam

Chain grips

+ BENEFITS

- Perfect to ensure a safe anchoring by easing the tension on the anchor chain
- Protects the boat by reducing the chafe of the chain on rub rail and roller chock
- Positioned between two links of the chain (single handed operation)
- Optimized design to avoid accidental release of the chain
- One piece with non moving parts
- Forged in Duplex stainless steel grade (increased mechanical & corrosion resistance)
- Made in France

N°	Part #	Length mm	A mm	W.L. Kg	Weight Kg	
CHAIN GRIP						
4	2994	For 8 mm chain	85	17	480	0.088

	2996	For 12 mm chain	125	24	960	0.287

Rings and adjusters

Wichard stainless steel rings and adjusters are hot drop forged from 316L stainless steel in a single piece, not just bent and welded. Forging is a far superior process, because it maintains the structural integrity of the metal and increases working load limits in real world applications. Each part is polished and passivated to create a beautiful, yet durable surface that is highly resistant to corrosion. The "W" pentagon (plus 316L) mark stamped into each part is your Wichard quality assurance.

Swivels

The Wichard swivels are used to link two parts which may have different rotation directions. Wichard offers a complete range of swivels forged either with HR stainless steel or grade 316L stainless steel.

Wichard offers a complete range of swivels:

- With clevis pin or pin with allen head.
- With large bail.
- For webbing applications.
- For mooring applications.

Swivels

Swivels « HR »

+ BENEFITS

- Full range of products
- Forged in 17.4 Ph HR stainless steel
- Outstanding working and breaking loads
- Ball bearing models available
- Multi-use on board
- HR swivels are not recommended for use underwater

Shackles

The quality of our products, and in particular our shackles, has proven its worth in many applications and especially in extreme sports.

Why choose a Wichard shackle?

- Remarkably strong
- Optimal size and weight
- Proven resistance to corrosion
- Quality manufacturing
- A wide range of products

Accessories on page 32

A wide range of products

Wichard provides the most complete range of shackles on the market. You'll find the right Wichard shackle for your boat or other applications.

+ A WIDE CHOICE AVAILABLE:

- Rope diameter: 4 mm to 24 mm
- Breaking load: 700 kg to 35 tonnes

+ VARIOUS MATERIALS:

316L S/Steel, 17.4 PH (HR) S/Steel, Duplex S/Steel or titanium; it's your choice:

- 316L stainless steel: the right compromise between strength and resistance to corrosion.
- 17.4 PH (HR) stainless steel: for greater mechanical strength.
- Titanium (Ta6V): when weight saving is the priority

+ VARIOUS FUNCTIONS:

Self-locking pin, captive pin, quick-release pin, allen head pin... Wichard makes different versions for various applications.

+ CE MARKING:

Some of our products can be used as lifting accessories and as such bear the CE marking (awarded under the auto-certification scheme in accordance with the Machines Directive 2006/42).

Each product displays the following information

- Working Load Limit (WLL)
- CE marking, product origin, manufacturer's logo
- Materials

Captive pin shackle - no risk of losing the pin

Self-locking pin - avoids accidental release due to vibrations

+ VARIOUS SHAPES

Our shackles come in various shapes to ensure they do a proper job, in the right conditions, and last for a long, long time.

Working Load (WL): for nautical applications.

Working Load Limit (WLL): for industrial applications only. The safety factor is 5 times the breaking load. $WLL = \text{Breaking load} / 5$

Self-locking shackles

+ BENEFITS

- Large range of self-locking shackles
- Head of shackle pin locked into one of the notches
- Avoids accidental release due to vibrations
- Available in various versions to suit many applications
- Forged in 316L stainless steel
- Designed and made in France

Working Load (WL): for nautical applications.

Working Load Limit (WLL): for industrial applications only. The safety factor is 5 times the breaking load. WLL = Breaking load / 5

1 shackle forged in HR 17.4 Ph stainless steel can be up to 60% more resistant than a shackle in 316L stainless steel.

Softlink: soft shackle

The soft shackle for all!

+ BENEFITS

- No knowledge of ropework required
- Replaces shackles and snap hooks
- Easy to fit and easy to open
- Remarkably light and strong
- Re-usable
- 3 sizes available
- Materials: stainless steel and Dyneema® SK 78

For the same strength, SoftLink is 4 or 5 times lighter than a 316L stainless steel shackle.

Maintenance

WICHINOX

New gel formula
Cleans and passivates stainless steel hardware

- Suitable for industrial applications
- Help reconstitute a passive protective film for stainless steel products
- Increases product longevity
- Easy to apply using a brush
- Use in the event of marked or deep-set corrosion (occasional use)
- Part #: 9605
- Volume: 250 ml

Blocks

Our blocks, wholly designed and manufactured in our factories, feature high-performance materials and are subjected to rigorous manufacturing and quality assurance processes. For whatever type of block, ball bearing, plain bearing, the shape of the sheave suits all modern ropes. They are also very easy to install due to the various types of fastening options.

Wichard offers a complete range of blocks:

- Rings
- Ball bearing and plain bearing blocks
- Snatch blocks
- Stainless steel blocks
- Deck accessories
- Roller blocks

Reefing point	✓				✓	
Cunningham	✓				✓	
Barberhauler		✓		✓		✓
Inhauler				✓		✓
Spinnaker tack point		✓	✓	✓		✓

For a 45° angle: The load factor will be 75%. A load of 100 Kg on the line will represent a load of 75 Kg on the block

For a 90° angle: The load factor will be 140%. A load of 100 Kg on the line will represent a load of 140 Kg on the block.

For a 120° angle: The load factor will be 180%. A load of 100 Kg on the line will represent a load of 180 Kg on the block.

For a 180° angle: The load factor will be 200%. A load of 100 Kg on the line will represent a load of 200 Kg on the block.

Deflection angle	Load factor
180°	200%
160°	197%
140°	187%
120°	180%
100°	153%
90°	140%
80°	129%
60°	100%
45°	75%
20°	35%
0°	0%

Friction blocks

FRX : RINGS

+ BENEFITS

- 5 sizes available
- Very strong
- Very light
- Various applications: mast-foot block, inhauler, barber-hauler and more.
- Suitable for all types of rope (Dyneema®, etc.)
- Materials: hard anodized aluminium for greater lifespan

N°	Part Block	ØA mm	ØB mm	C mm	Ø D mm	WL Kg	Weight Kg	Material

Applications
Mast-foot block, barber-hauler, inhauler, loop, thimble, lazyjack, running backstay, tackle, and more.

Friction blocks

MXLEvo : The universal soft block solution

The MXLEvo is a soft block solution designed for all yachtsmen, whether amateur or pro. Designed for heavy load applications (mast foot, halyard tackle, barber hauler, snatch blocks, etc.), this system is available in three sizes.

Fig	Part #	Height mm	Width mm	Thick mm	Loop length mm	nominal Ø loop mm	W.L. Kg	B.L. Kg	Weight Kg
MXLEVO 10 - FOR MAX ROPE SIZE 10 MM									
1	21104	30	40	26	170	4	800	2000	0.040
MXLEVO 12 - FOR MAX ROPE SIZE 12 MM									
1	21105	40	54	35	220	5	1600	3800	0.090
MXLEVO 16 - FOR MAX ROPE SIZE 16 MM									
1	21106	47	60	41	270	6	2500	5000	0.140

+ BENEFITS

- Economical and easy to use
- Designed for heavy load applications
- Lightweight, robust and highly compact
- A reliable solution and maintenance free
- Adaptable to your deck plan and anchor orientation: 2 fastening methods
- High quality materials: Duplex grade stainless steel -Dyneema® SK78
- Available in 3 sizes

MXLEvo provides exceptional resistance for its weight. In comparison with a standard competitor's block,

The MXLEvo 10 is:

- > twice as robust
- > half the weight
- > a third of the size

> For a breaking load of 5 tonnes, the MXLEvo 16 is 35% lighter.

Heavy load applications:

- Mast foot block,
- Halyard tackle,
- Barber hauler,
- Block and tackle,
- Sheet return,
- Large sail foot, etc..

Friction blocks

MXEvo : Blocks

+ BENEFITS

- 2 VERSIONS AVAILABLE:
 - Captive pin version: 3 models
 - Allen head pin version: 3 models
- Perfect for taking on the heavy loads of flying sail furler terminals and 2:1 purchase mainsail halyards, mastfoot deflection
- Becket feature for purchase
- Outstanding working and breaking loads
- Optimised dimensions and weight
- Easy to install and use
- Reliable and maintenance free
- Helps to prevent excessive rope wear

MXEvo: Captive pin version

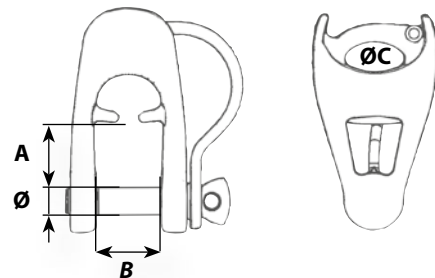

N°	Part # Captive pin version	Length mm	Width mm	Ø mm	A mm	B mm	Ø C mm	W.L. Kg	B.L. Kg	Weight Kg

**MXEvo:
allen head pin version**

This version of the MXEvo has been specifically designed for Mast-foot fairleads,

- Running backstays
- All other applications that are not handled frequently.

Stainless steel blocks

+ BENEFITS

- Large range covering all applications
- Lightness, reliability and good performance
- Wide choice of fastenings
- Perfect for dinghies and cruising yachts

Roller Blocks*

SHEAVE 30, 40, 50

Roller blocks

Wichard roller bearing blocks are designed to be simple, reliable and long-lasting. They are ideal for dynamic running rigging that is subject to heavy loads (mainsail tackle, mastfoot block, etc.).

Roller Blocks*

SHEAVE 65, 80

COMPONENTS: ROLLER BEARING BLOCKS

1. Forged stainless-steel shackle (HR s-steel for HR models).
2. Stainless-steel swivel head
3. 316L stainless-steel bolt
4. Aluminium cheeks (hard coat anodization)
5. Delrin® roller bearings (Torlon® for HR models).
6. Centring bush for lateral loads
7. Stainless-steel circlip
8. Hard anodized aluminium sheave (+ Teflon for HR models).
9. Hard anodized aluminium hollow pin (+ Teflon for HR models).

Soft snatch blocks

- 4 models available from 2T to 7T
- Various applications on board
- High resistance and lightness
- Easy and fast installation thanks to Dyneema® loop
- Fast and safe opening / closing with the Velcro® strap
- Modern design
- Sheave protection by the cheeks
- Material: anodised aluminium (cheeks & sheave), Dyneema® loop, stainless steel dogbone

APPLICATIONS :

- Flying sail furler terminals (2:1 gennaker halyard)
- Main sail (2:1)
- Barber-hauler
- Sheets
- ...

Snatch blocks with snap shackle

Fitted to a pad eye or toe rail Wichard snatch blocks are highly useful for taking up a rope that is already reeved. The elastomer moulded cheeks make them shock and scratch-resistant. Each one is fitted with a snap shackle which allows them to move freely in any position. With its forged high-resistance stainless steel arm, the closing system is very strong. It can be opened very easily by pulling on the central plunger pin, as you would do with a normal snap shackle.

For sport boats or dinghies, swivel bases enable the boat's fittings to be optimised. They are manufactured according to Wichard tradition of quality, and form part of the original equipment on many modern designs. Their dimensions and the adjustable orientation of the cam cleats, mean they can be installed on your boat without any modifications.

Safety

Tethers, Gyb'Easy the Wichard boom brake,
Lyf'safe, the jacklines kit

Wichard designs cutting-edge technology products whose
main function is to provide enhanced safety.

They are robust, easy to use and will bring
you satisfaction.

Boom brake

Gyb'Easy

Gybing remains one of the most challenging operations on a sailing boat even for experienced sailors and can possibly generate injuries and material damage. An efficient and safe solution: Gyb'Easy the Wichard boom brake.

Concept

Thanks to the frictions of the specific line passing over the boom break, the boom is allowed to gybe smoothly. With Gyb'Easy, the gybe operations are safer, potential accidents reduced and without jerks.

Settings of Gyb'Easy

The adjustment of Gyb'Easy is made thanks to the tension of the specialized line. 3 different positions exist for a perfect adaptation to the mainsail and wind conditions (see pictures).

The more the line passes over the openings, the more the friction is increased and hence the brake efficiency.

An easy installation on all kinds of boats

The installation only takes a few minutes: a shackle is attached onto one of the boom eye straps. In order to fit with all deck configurations, two different fittings can be implemented. The boom brake can be installed either on modern boats or old gaffers.

Features:

- Can be used on mainsail areas below 40 sqm.
- Material: aluminium with anodisation.
- Weight: 0.600 kg.
- Part #: 7150 (delivered with rope and shackle). Part # 1244
- Rope available in two lengths 16 und 25 m

Jacklines

Lyf'Safe

The Wichard jackline

Universal, Ready-to-use, Reflective

Either sailing solo or fully crewed, operating on the foredeck in most conditions require extra attention and safety precautions.

Lyf'Safe by Wichard is a complete jackline kit allowing safer operations and offering added value to the crew.

Adaptable and universal

Lyf'Safe can be tailored to the length of the boat (using the adjuster) and can be fitted on to most deck fastenings (padeyes, pulpit/pushpit, cleats).

Ready-to-use

Easy to install, Lyf'Safe does not require additional fastening components such as shackles.

Reflective

Thanks to its reflective stripe and photoluminescent casing, Lyf'Safe can be easily identified when sailing at night.

Locking system of the webbing

The adjuster casing prevents any accidental adjustment or release of the webbing.

Resistant and anti-chaffing

The anti-abrasion edges to the webbing prevent early wear and fraying, the soft elastomer casing isolates the deck, eliminating noise and vibrations.

Aesthetic

Lyf'Safe is an elegant solution suiting most modern deck designs.

4 models available :

- Part # 7051 : length 8,5m.
- Part # 7052 : length 11m.
- Part # 7053 : length 14m.
- Part # 7054 : length 16m.

Components of Lyf'Safe :

- 2 reflective webbings.
- 2 forged adjusters.
- 2 photoluminescent casings.
- 1 set containing 8 screws.
- 1 installation manual.

ProLine

When it comes to safety, compromise is not an option. That is why Wichard has developed a new generation of tethers to ensure maximum safety and ease of use thanks to some innovative new features.

Maximum safety

- ErgoLockSystem (patented): automatically closes and locks the snap hook
- Locking indicator
- Retro-reflective webbing, visible at night
- Overload indicator (as per ISAF offshore special regulations)

Uniquely easy to use

- Easy opening snap hook
- V-Nose (patented): special tip makes hooking and unhooking easy with one hand
- Wide opening snap hook (26 mm)
- Compact light tether

+ BENEFITS

- 4 models available
- Compliance with ISO 12401:2009 and ISAF regulations (OSR)
- Overload indicator with shock absorber on all models

PPE:TETHERS

ProLine'R

Releasable tether under load

The ProLine'R range is equipped with a forged stainless steel snap shackle meaning they can be released under load in emergency situations (man overboard, capsizing, etc.). The ProLine'R have all the features of the Proline range: ergonomic design, wide opening, high levels of safety, lightweight structure and replaceable webbing.

Part #	Description	Length Max	Weight Kg
7061	1 ProSnap snap hook + 1 quick opening snap hook part # 2299 - elastic webbing with overload indicator	2 m	0.320
7064	2 ProSnap snap hooks + 1 quick opening snap shackle part # 2299 - elastic webbing + flat webbing - with overload indicator	2 m + 1 m	0.474

+ BENEFITS

- 2 models available
- Snap shackle on the harness can be released
- Overload indicator (OSR-Isaf) with in-built shock absorber
- CE marking

Accessories

Exclusive feature: EcoLogic

Removable snap hook lets you increase the lifespan of the product by replacing the webbing only. Our exclusive EcoLogic feature makes ProLine a budget-friendly range!

Exclusive feature: SmartLoop

Product can adapt to suit all needs and users. SmartLoop lets you:

- turn a single webbing tether into a double webbing tether (see fig. A)
- turn a double webbing tether into two single webbing tethers (see fig. B)

INFORMATION ABOUT THE ISO 12401:2009 STANDARD

For the amateur sailor safety, the standard demands:

- Self-locking carabine hooks
- A possible unhooking from the harness side (for people above 50Kgs)
- An impossible unhooking from the harness side for people below 50Kgs (children)

+ BENEFITS

- Large range of tethers
- Compliant with ISO 12401:2009
- Available with double action safety hooks (phosphorescent) or carabiner hooks
- Available with flat or elastic tethers
- Ensures safety during movements on deck
- Designed and made in France

N°	Part #	Description	Weight kg
TETHER WITH DOUBLE ACTION SAFETY HOOKS			
1	7005	Elastic harness tether from 1 to 2 m, with double action safety hooks.	0.398
2	7006	Elastic harness tether - 1 m fixed line, the other retracts from 2 to 1 m with three double action safety hooks.	0.582
3	7015	Harness tether, 2 meter long with two double action safety hooks.	0.392
4	7016	Harness tether, flat webbing (25mm), 2 meter long with one action safety hook.	0.210
TETHERS WITH STAINLESS STEEL CARBINE HOOKS			
5	7001	Elastic harness tether from 1 to 2 m, with two stainless steel carbine hooks.	0.418

+ BENEFITS

- Fitted with a quick opening snap shackle on the harness side
- With an overload indicator
- 2 models available
- Designed and made in France

N°	Part #	Description	Weight kg
TETHERS RELEASABLE UNDER LOAD			
8	7007	Elastic harness tether. Retracts from 2 to 1 meter, with overload indicator, one double action safety hook and one quick opening snap shackle.	0.348
9	7008	Elastic tether, 1 meter fixed line, the other retracts from 2 to 1 meter, with overload indicator, two double action safety hooks and one quick opening snap shackle.	0.480

PROTECTING THE ENVIRONMENT

At Wichard, we don't simply pay lip service to environmental protection.

When manufacturing our knives, we do everything practical to contribute to protecting nature on a daily basis:

- Manufacturing our knives locally and nationally.
- Sourcing materials nationally or in Europe.
- Reducing components.
- The use of recyclable materials (for example paper from sustainably managed forests).
- Building awareness among our suppliers of the need to preserve the environment and verifying that suitable measures are being taken.

Knives

The Wichard spirit

Ever since it was founded in 1919, Wichard has produced its knives in Thiers, the traditional home of knife-making in France.

As manufacturers specialising in marine hardware, we have designed our new knife ranges to provide you with Wichard's proven strength and reliability in all circumstances during your nautical activities.

A Wichard knife is a must-have tool offering outstanding cutting performance as well as being easy to use, safe and long-lasting.

Usage

All Offshore and Aquaterra knives are fitted with a locking blade.

The shackle opener - marlinspike on the Offshore model can also be locked in the open position for improved comfort during use.

- To unlock the blade, simply press the back of the knife.
- On the Offshore models, the cut-out section on the blade allows you to open the blade one-handed. Do not use this cut-out for unshackling.

Maintenance & storage

Here are a few handy tips to ensure optimal operation and a long life for your Wichard knife:

- Wipe your knife after each use or rinse it in clear water.
- Never put your knife in the dishwasher.
- Allow it to dry with the blade open to facilitate the evaporation of water.
- After several rinses, you can apply 3 in 1 oil to the mechanism.

OFFSHORE

SAILING KNIFE STAYS SHARP IN ALL CONDITIONS

Designed for sailing and for highly demanding skippers, the «Offshore» knife offers a range of essential functions on-board a boat: Cutting quality, night visibility, locking blade, one-handed opening, corrosion resistance, mechanical resistance...

Its serrated blade enables you to easily cut all types of modern ropes including Dyneema®. The shackle opener - marlinspike version is also a vital tool on-board a sailing boat. Each Offshore knife is equipped with an adjustable wrist strap to avoid losing your knife when using it.

The secured sheath enables the knife to be positioned in all situations. The sheath offers many fastening points : personally on the sailor (lifejacket, arm, leg), on various locations (cockpit, steering wheel, mast foot, trampoline, catamaran cross beams).

RESCUE LINE CUTTER

The line cutter enables the cutting of small diameter lines (Dyneema lines, nets, webbings, kite lines i.e..). Thanks to a specific surface treatment, the line cutter is specially hardened (70 HRC) for better and longer cutting power.

Technical information

Warranty

All Wichard products are warranted to be free of defects in materials or workmanship for five (5) years from the date of purchase by the original end-user. Excluded from this warranty are:

- Any product which has been improperly fitted.
- Any product which has been improperly used or used in any application for which it was not intended.
- Any product which has been improperly maintained.
- Any product modified without a written approval from Wichard.
- Any damage being a consequence from alteration, from ultraviolet light exposure or from the normal wear of products.

The useful life of any products is determined by its utilisation and an appropriate factor of safety (see page 67). It must be distinctly assessed in each application. Thus no guarantee can be provided for product life, dynamic capacities or any other factor due to the variability in usage.

Wichard's liability is limited to the repair or replacement of the defective goods exclusive of any other repair. Responsibility and costs of handling, transportation and any custom duties and tariffs linked to the warranty claim are in any case borne by Wichard.

Corrosion in marine environment

All Wichard products are passivated. Corrosion attacks stainless steel and is always visible in the form of black coloured roughness. Although this is dangerous, it is rarely seen in current use, except in cases where martensitic (HR) steel is in total, prolonged immersion. What many people erroneously call corrosion, is really rust, or oxidation. This is due to outside causes. In the marine environment, stainless steel is subject to considerable aggressive forces and is not totally corrosion free. Re-passivation can be accomplished with a passivator such as Wichinox (see page 8). All stainless steel products demand a minimum of upkeep.

Stainless steel

Wichard uses top-quality grades of stainless steel in its products (see chart). The first type is a low carbon austenitic steel (316L), which offers good mechanical characteristics. They are non-magnetic steels and most of Wichard products are manufactured in this grade. The second (17.4PH) is martensitic steel (magnetic), which is referred to as high-resistance steel (HR).

Type	Austenitic	Martensitic
Common name	18.12 Mo	17.4 PH
European Standard	X2CrNiMo17-12-2	X5CrNiCuNb 16-4
US AISI Standard	316 L	630
Composition Carbon	< 0,03 %	< 0,07 %
Chromium	18 %	16,5 %
Nickel	12 %	4 %
Molybdenum	3 %	
Copper		4 %

Why a Wichard shackle?

A Wichard shackle is manufactured on a very old principal, forging. Wichard has perfected and machined this process down to the smallest detail.

Reliability and high quality

After the raw metal bars are checked on chemical alloy and quality, the metal is heated to the right temperature to be forged. Then the metal is pressed in its new shape with great force by a hydraulic hammer. Due to this process the metal obtains an organized structure without any weakness. Because of this structure, called fibers, the metal object is not only very strong but also has an "elastic" property.

Casted metal objects of the same design are less strong because the structure in the metal is not the same everywhere in the object. Next to this there is the chance that small air bubbles are enclosed during the casting. This causes a capital weakness in the casted object. Even objects machined from a block of metal can have weaknesses. Where the metal is machined into a curve the structure in the metal is broken and becomes a weak point in the object. When the object is overloaded it will break at this point.

Performance and security

Due to the technique of forging every object of the same design and shape has the same properties with a small tolerance of deviation. By controlling all important factors Wichard can guarantee an accurate breaking load and working load for each individual object.

Wichard advises to respect carefully the Working Load (WL) indicated for each of its products. If a Wichard product is overloaded between the safe working load and breaking load the product will deform due to its "elastic" property. This gives the user an extra safety margin and shows when the product is overloaded. Deformed parts have to be replaced immediately preferably by a part in a larger size.

Technical information

Definitions

Working Load (WL) indicates the value of static load at which the product will still function without excessive friction or wear or permanent deformation of components.

Breaking Load (BL) indicates the value of static load for which a major failure of one or some structural components or the complete destruction of the product can be expected when new. Plastic components may split, rivets may give way, shackles or any other connection parts break and other metallic components may fracture.

Units of load

Our resistance values are shown in kilogramme-force (symbol: kgf or more usually kg), which is the force due to gravity sustained by a mass of 1 kg situated at the latitude of Paris. This unit of force is obsolete, and is not part of the SI international system of units, which links concepts of mass and weight. The unit of force used in the SI system is the Newton (N).

To pass from the kilogramme-force to the Newton its value must be multiplied by g , the acceleration of gravity, which is 9.80665 m/sec^2 at the latitude of Paris, or $9.80665 \text{ N} (\text{N} = \text{kg} \times \text{m} \times \text{s}^{-2})$. In the fields where the kgf appears we should now use the decanewton (or dekanewton), daN: $1 \text{ kgf} = 9.80665 \text{ N} = 0.980665 \text{ daN}$ ($1 \text{ daN} = 1.019716 \text{ kgf}$).

Our test equipment measures loads in daN, but bowing to custom and for reasons of simplicity and safety, we still give values in kgs in our brochures and on our products. Our measured values have simply been converted into kgs.

Factor of safety

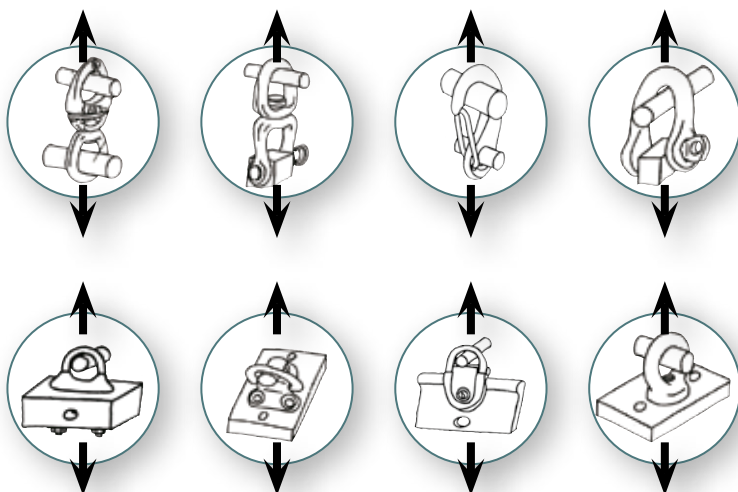

Before choosing or specifying a particular product, an appropriate factor of safety should be applied to Breaking Loads (BL) to suit each application.

For many industrial and safety applications, and for some yachting application, a factor of safety greater than two (2) should be used or may be required by law or other regulations. It is the customer's responsibility to ensure that an appropriate factor of safety is used, and it should take into account safety implications, service life, fatigue (as may be caused by wave action, wind stress or repetitive cyclical loading), type of load, exposure to ultraviolet light, corrosion and stress corrosion (such as in high humidity or high chlorine environment). Even more attention is required when specifying blocks as other factors have to be taken into account such as rotary speed, deflection angle of the rope or the number of wire of the tackle (see page 31 of the present document). Note that a "Safe Working Load" is not specified as this is dependent on the factor of safety, which must be determined by the user relative to each application.

In any case, never use the products over the working load !

Useful life

The useful life of any products is determined by the above factors and must be assessed in each application. Thus no guarantee can be provided for product life, dynamic capacities or any other factor due to the variability in usage. In some jurisdictions government regulations require the replacement of rigging components within certain periods of time, usually after three or five years. You must ascertain whether any such regulations affect you and take appropriate steps if you are affected.

Maintenance and inspection

All your marine hardware, blocks and equipments must receive regular inspections to prevent any deformation, wear, cracks or corrosion. Even if your products have had little use, ultraviolet light exposure, wave action, humid or saline environment may cause damage that could affect quality or strength of the equipment. If, after inspection, you are in doubt about the integrity of one of some parts, it is the customer's responsibility to replace the defective components or product to ensure his own safety.

While every precaution is taken in the product design and manufacturing processes of our products to minimize the effects of corrosion or stress corrosion, appropriate preventive or corrective treatments must be carried out to the products after installation.
